

2016 lifesaving percentage:

Little Traverse Bay Humane Society is proud to share our lifesaving percentage. This includes our save rate, which is 98.8-percent. We calculate this by:

781 (our intake number)

-9 (euthanasia outcomes)

772 divided by total intake (781) = **98.8-percent save rate in 2016**

This tells us the percentage of animals admitted to the shelter that were NOT euthanized. Little Traverse Bay Humane Society is considering to be a “no-kill” shelter, which means that no animal will be euthanized for lack of space. We keep all of the animals in our care until they find a home, regardless of how long this takes. However, if an animal is severely ill, aggressive or in severe pain, we will euthanize, but only with a veterinarian’s recommendation.
